

Principal Power Platform Architect  
Dynamic Consultants Group, Coppell, TX

## **Job Description**

Within the field of practice, define, maintain, and evolve solution specific architectural standards and guidelines, in line with overall standards and guidelines. Ensure that sustainable and value-creating solutions are chosen to fulfill business needs, based on both own and others' suggestions.

## **Responsibilities**

- Estimate development work as outlined by sales and operations to both demand framing and detailed planning.
- Create robust, performance-optimized, efficient, scalable, reusable, and value-creating architectures as well as functional and non-functional designs to fulfill solution requirements. Includes all types of solution components, such as configuration, code objects, forms, workflows, reports, and integrations.
- Ensure that patterns, functional designs, and non-functional designs are appropriately documented.
- Perform or lead fit/gap analysis between solution requirements and existing functionalities.
- Transition designs to Developers to ensure a clear and complete understanding of plans.
- Provide guidance, best practices, and procedures to developers building the solution.
- Work with other team members to ensure that designs and solutions work together and fulfill requirements.
- Follow general and application-specific best practices.
- Research and review new technologies for applicability to solutions within the field of practice.
- Review existing design patterns for applicability to solutions within the field of practice.
- Identify and suggest improvement opportunities for assigned applications.
- Coach and support colleagues in subject matter knowledge and ways of working.
- Be available for and suggest peer reviews of personal and others' work.
- Be available for and suggest evaluation of lessons learned from tasks and activities.
- Perform and advise users in performing configuration and development changes.
- Create and execute relevant test cases and supporting test scripts to test solutions against requirements.
- Support and execute system testing, integration testing, acceptance testing, and performance testing.
- Independently and as a team, resolve incidents, requests, and activities with the objective to provide the best-in-class end-user support.
- Support and perform defect and root cause analysis.
- No hire/fire Authority.

## **Requirements**

- Bachelor's degree in Computer Science, Software Engineering, Information Technology, or related field plus five years of related work experience.
- Must have experience with: Dynamics 365 Business Solutions, Software Development Life cycle, Agile Methodologies, Java, C#, .Net framework, and React Native mobile framework.

- Must have experience with multi-faceted business and domain knowledge.
- Must have five years of experience in a Solution Architect role.
- Must have experience in Project Management, application procurement, development, and implementation using DevOps principles.
- Must have experience working in a structured project management framework including SCRUM or PMI.
- Must have experience in working with 3rd party service providers.
- Telecommuting permitted: remote work possible within a reasonable commuting distance from the Coppel, Texas office.
